Medical Document Privacy

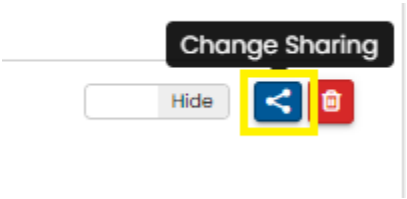

Uploading Medical Documentation

If you are uploading any medical document, additional privacy steps will need to be taken when uploading the document to Avionte:

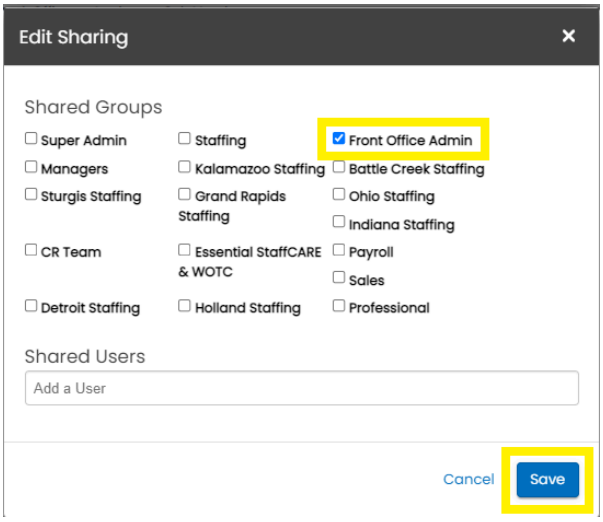

1. Before uploading the document, change the document privacy to "Private" and the document type to "Medical." Then select "Upload Document."

2. Once the document has been uploaded, select the "Change Sharing" button for the medical document.

3. Select "Front Office Admin" from the "Shared Groups" list and click "Save."

Updating the privacy settings in this way will allow the document to be viewed only by the person who uploaded the document and the FOAs in each office. The document can also be accessed by HR and Training if needed by sharing with the Front Office Admin group.

Sharing Medical Documentation with Clients

With the privacy that comes along with medical documentation, these documents cannot be shared with clients without explicit written consent from the associate. This consent must be:

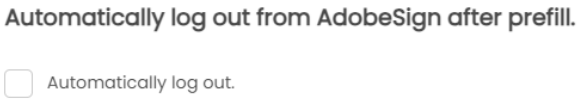

- Obtained with the client's name specified (and re-completed if needed for a new client)
- Completed voluntarily and as needed, not part of orientation for all associates
- Signed and uploaded to the profile before sharing medical documentation

To obtain this consent, please use one of the following options:

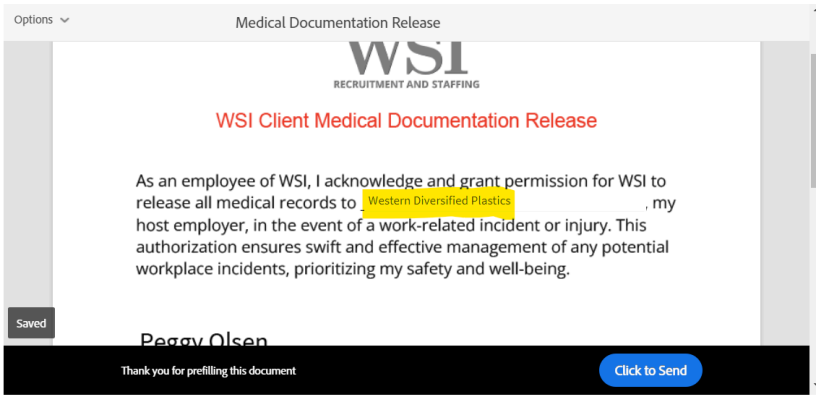

- **Paper Form**
  - Write the name of the client in the space provided before the associate signs the form: Medical Documentation Release to Client.pdf
- **Avionte Form**
  - Select "Medical Documentation Release" from the e-signature drop down menu on the onboarding tab.

  - Once you click send, you'll receive a notice that the form must be pre-filled and asked if you'd like to be automatically logged out of Adobe once the form is sent. Be sure the box to automatically log out is **NOT** checked and click continue.

  - Prefill the document with the name of the client and click send, then continue at the bottom of the screen.

  - The associate will need to login to their Avionte portal to complete the document.
